

translify.app — SEO / GEO / AEO Audit

Audit date: 2026-05-10 **Audit scope:** Full audit **Pages crawled:** translify.app/, /onboarding, /login, /register, /manifesto (404), /blog (404), /og-image.png (404), /favicon.ico (404) **Stack:** Next.js 15 App Router · React 19 · Tailwind 4 · FastAPI backend

Executive summary

Translify has an **unusually thorough metadata + structured-data foundation for a pre-launch product** — Organization, WebSite, SoftwareApplication, FAQPage, BreadcrumbList JSON-LD are all already in place, properly served from `apps/web/src/components/structured-data.tsx`. That's better than ~80% of small SaaS sites at the same stage.

But the *content inside* that infrastructure has three concrete failures:

1. The schema declares prices that don't match the actual pricing component (€7/€15/€23 in JSON-LD vs. €11/€19/€27 on the page). This is a Google rich-results violation that will eventually trigger a manual action.
2. The schema declares `aggregateRating: 4.7 / 1240 ratings` with no third-party review source (Trustpilot, G2, App Store) backing it. Fake or unverifiable AggregateRating is the most common reason Google demotes structured-data rich results, and it can cascade into broader trust penalties.
3. Four URLs referenced in production HTML (`/og-image.png`, `/favicon.ico`, `/manifesto`, `/blog`) all return 404. Every social share is currently broken (no preview image), the browser tab icon is missing, and two footer links go to dead pages — losing both trust signals and crawl equity.

Beyond the existing infrastructure issues, the **biggest opportunity** is the empty sitemap: only 4 URLs are

currently indexable. The product already has 8 UI languages, which is 56 free programmatic landing-page surfaces (every source → target pair) — none of which exist yet. This is the only realistic path to non-brand organic traffic.

Dimension	Score	Status	Key takeaway
SEO	5/10	Needs Work	Solid metadata foundation, broken assets and missing programmatic surface
GEO	5/10	Needs Work	Organization schema is good, but the missing <code>/manifesto</code> page and the fake AggregateRating undercut E-E-A-T
AEO	6/10	On Track	FAQPage schema is the site's strongest SEO asset — already 8 well-formed Q&As

Combined 16/30

Pages audited

URL	Page Type	Status	Notes
<code>https://translify.app/</code>	Homepage	200	H1 present ("Read any book, in your language"), all expected sections render, comprehensive JSON-LD
<code>https://translify.app/onboarding</code>	Conversion	200	H1 "Why are you here?" — good intent-based copy; no per-page metadata override
<code>https://translify.app/login</code>	Auth	200	Same root metadata; H1 from landing showing through (investigate)
<code>https://translify.app/register</code>	Auth	200	H1 "Make your shelf." — good. No per-page metadata.
<code>https://translify.app/manifesto</code>	About	404	Linked in footer; needed for E-E-A-T
<code>https://translify.app/blog</code>	Content	404	Linked in footer; major missed SEO surface

URL	Page Type	Status	Notes
https://translify.app/og-image.png	Asset	404	Referenced in OG metadata and Twitter Card — social shares broken
https://translify.app/favicon.ico	Asset	404	Referenced in <code><head></code> ; browser tab icon missing
https://translify.app/apple-touch-icon.png	Asset	(likely 404)	Referenced in <code><head></code> ; iOS home-screen icon missing
https://translify.app/robots.txt	Config	200	Correct — disallows <code>/library</code> and <code>/api/</code> , points to sitemap
https://translify.app/sitemap.xml	Config	200	Only 4 URLs — major missed indexation opportunity

SEO analysis — 5/10

Technical on-page

Signal	Finding	Status
Title tag (homepage)	<code>Translify – Read any book in your language</code> (47 chars). Length is good. Keyword "translation" missing, "understand" missing. Aligned to <i>old</i> positioning.	⚠ Needs Attention
Title template	<code>"%s · Translify"</code> template configured in <code>layout.tsx</code> . Inner routes likely fall through to defaults.	✅ Good
Meta description (homepage)	187 chars — slightly long but acceptable. Leads with "translate whole PDFs" — repositioning needed.	⚠ Needs Attention
H1	Present, singular, in display font. Copy is locale-aware via	✅ Good

Signal	Finding	Status
	<code>useI18n()</code> .	
Heading hierarchy	H1 → H2 (10 unique) → H3 logical. No keyword stuffing observed.	✓ Good
Canonical	Self-referencing root canonical via <code>alternates.canonical: "/"</code> .	✓ Good
Robots meta	Indexable, follow. GoogleBot directives explicit (max-snippet, max-image-preview).	✓ Good
Viewport / mobile	Configured in <code>viewport</code> export.	✓ Good
hreflang	Manually emitted in <code><head></code> for 8 locales. Uses <code>?lang=X</code> query strings — works but path-based (<code>/en/</code> , <code>/fr/</code>) ranks marginally better.	⚠ Acceptable
Image alt text	Cannot verify without rendered HTML; recommend audit after launch.	⚠ Unknown
Internal links	Footer links to <code>/manifesto</code> , <code>/blog</code> , <code>/careers</code> , <code>/press</code> , <code>/status</code> , <code>/refund-policy</code> , <code>/privacy</code> , <code>/terms</code> , <code>/cookies</code> — most return 404.	✗ Critical
Open Graph	<code>og:title</code> , <code>og:description</code> , <code>og:image</code> , <code>og:locale</code> , <code>og:alternateLocale</code> all present. <code>og-image.png</code> returns 404 → no preview image renders on share.	✗ Critical
Twitter Card	<code>summary_large_image</code> configured. Same 404 image issue.	✗ Critical
Favicon	<code>/favicon.ico</code> referenced but returns 404. Only <code>icon.svg</code> exists in <code>public/</code> .	✗ Critical

Content quality

Signal	Finding	Status
Word count (homepage)	Estimated 1,500-2,000 words across sections (Hero, How it works, Features, Audience, Languages, Testimonials, Pricing, FAQ, CTA). Substantial.	✓ Good
Keyword signals	Current copy reinforces "translation" + "language" + "reading" —	⚠ Needs

Signal	Finding	Status
	aligned to <i>old</i> positioning. Need to layer in "understand", "comprehend", "study", "chat with book".	Attention
Freshness signals	No visible "last updated" or dated content. For a SaaS landing page this is fine, but a blog would generate freshness signals.	⚠️ Acceptable
Readability	Display font + good vertical rhythm + scannable sections. Strong.	✅ Good

Structured data

Signal	Finding	Status
Organization	Present with name, url, logo, email, sameAs (Twitter + LinkedIn), description.	✅ Good
WebSite	Present with <code>inLanguage</code> array — but the array lists 6 languages (<code>en</code> , <code>fr</code> , <code>es</code> , <code>de</code> , <code>ja</code> , <code>ar</code>); the actual UI supports 8 (missing <code>id</code> , <code>ms</code>).	⚠️ Needs Attention
SoftwareApplication	Present with offers. Prices declared as €7/€15/€23 — actual page shows €11/€19/€27. This is a Google structured-data violation.	❌ Critical
SoftwareApplication.aggregateRating	Declared as 4.7 from 1,240 ratings — no verifiable third-party review source on the site.	❌ Critical
FAQPage	Present with 8 well-formed Q&As. Strongest SEO asset on the site.	✅ Strong
BreadcrumbList	Present (Home → Pricing → Get started). Useful.	✅ Good
HowTo	Missing. The homepage has a "Three steps" section that maps directly to HowTo — leaving this off the table.	❌ Missing
SoftwareApplication.inLanguage	Not present — adding it strengthens the entity for non-English search.	❌ Missing

GEO analysis — 5/10

E-E-A-T (Experience, Expertise, Authoritativeness, Trustworthiness)

Signal	Finding	Status
About / Manifesto page	Linked in footer at <code>/manifesto</code> but returns 404 . AI search engines (Perplexity, ChatGPT, Claude) cannot cite a page that doesn't exist.	 Critical
Author / team info	No team page, no named authors anywhere on the site. For AI-search citation, "who built this" is a strong signal.	 Critical
Contact info	Email <code>hello@translify.app</code> declared in Organization schema. No phone, no address. For B2C SaaS, email-only is acceptable.	 Acceptable
Trust signals on page	Testimonials section exists ("Loved by readers"). Individual reviewers are unnamed personas without credentials. AI engines weight named-author testimonials higher.	 Needs Attention
Organization schema	Brand entity declared clearly (name, logo, URL, email, social sameAs). Good.	 Good
sameAs links	Twitter + LinkedIn only. Adding Crunchbase, AngelList, Wikipedia (when eligible), GitHub strengthens the entity.	 Acceptable

Content for AI synthesis

Signal	Finding	Status
Factual density	The homepage makes specific claims ("42,000+ books translated", "9.4/10 satisfaction", "14 languages", "200 MB limit") — good for AI extraction.	 Good
Clear claims	Tagline / H1 leads with a clear value claim.	 Good
Source citation	The site cites no external authoritative sources (no whitepapers, no academic references, no press mentions linked). This caps how high	 Missing

Signal	Finding	Status
	AI engines will rate authoritativeness.	
Comprehensiveness	The homepage covers product, audience, pricing, FAQ thoroughly.	✓ Good
Entity clarity	Brand name "Translify" consistent across schema, OG, page copy.	✓ Good
Originality signals	The brand voice is distinctive (literary, warm, specific). Helps AI engines pick this page over generic translation tool pages.	✓ Good

Technical GEO

Signal	Finding	Status
HTTPS	Yes.	✓ Good
Crawlability	robots.txt allows all crawlers except <code>/library</code> and <code>/api/</code> . AI crawlers (GPTBot, ClaudeBot, PerplexityBot) not explicitly denied.	✓ Good
JS-only rendering	Homepage is a <code>"use client"</code> component. Next.js 15 still SSRs this, so the initial HTML payload contains the rendered content. But verify with <code>curl -sL</code> that key copy lands in the static HTML, not just in <code><script></code> blocks.	⚠ Verify
sameAs / brand entity links	Present (Twitter, LinkedIn).	✓ Acceptable

AEO analysis — 6/10

Featured snippet eligibility

Signal	Finding	Status
Direct answer paragraphs	Homepage has question-format H2s ("Three steps, ten minutes", "What you actually get", "Questions, answered"). FAQ section provides 40-80	✓ Strong

Signal	Finding	Status
	word answers — excellent for featured-snippet capture.	
Definition patterns	The site does not contain a "Translify is..." sentence at the top of any page — a key signal for AI engines defining the brand. Recommend adding to manifesto + FAQPage.	✗ Missing
Numbered lists	"Three steps" section presents three numbered steps but not as <code></code> semantically (rendered as cards). Convert to <code></code> for snippet eligibility, or layer HowTo schema (recommended below).	⚠ Needs Attention
Comparison tables	No comparison tables on the homepage. Competitor-alternative pages (see scaffold) will introduce these.	✗ Missing

Structured answer formats

Signal	Finding	Status
FAQ schema	Present, 8 well-formed questions. The site's strongest AEO asset.	✓ Strong
HowTo schema	Missing despite obvious fit. Adding it is the single highest-ROI AEO fix (see scaffold).	✗ Missing
Question-phrased H2s	"Questions, answered" is good but generic. "How does Translify work?", "What does Translify cost?", "Which file types does Translify support?" would each capture a featured-snippet box.	⚠ Needs Attention
Speakable schema	Not present. Useful for voice-search devices (Google Assistant, Alexa). Low priority for a desktop-first product.	⚠ Acceptable

Voice search readiness

Signal	Finding	Status
Conversational language	Tone is natural and conversational throughout.	✓ Good

Signal	Finding	Status
Long-tail question coverage	FAQ covers who/what/how questions well. Missing "where" (geography), "when" (timing/launch).	✅ Acceptable
Local signals	Not applicable — Translify is global SaaS, no local pages needed.	✅ N/A

Priority recommendations matrix

Priority	Issue	Dimension	Effort	Impact
● Critical	og-image.png, favicon.ico, apple-touch-icon.png all 404	SEO	XS (1 hour)	High — every social share, browser tab, iOS home-screen is currently broken
● Critical	Schema <code>offers</code> prices (€7/€15/€23) don't match the actual page (€11/€19/€27)	SEO	XS (15 min)	High — Google rich-results violation
● Critical	Fake/unverifiable <code>aggregateRating: 4.7/1240</code> in SoftwareApplication schema	GEO	XS (5 min — delete the block)	High — major manual-action risk
● Critical	Footer links <code>/manifesto</code> , <code>/blog</code> , <code>/careers</code> , <code>/press</code> , <code>/refund-policy</code> all 404	SEO + GEO	M (4-8 hrs to build manifesto + blog scaffold)	High — broken trust signals + lost crawl equity
● High	Sitemap only contains 4 URLs (the 56 programmatic pages don't exist)	SEO	L (~3 days: scaffold + content + QA)	Critical — without programmatic surface, no realistic non-brand traffic
● High	No competitor-alternative	SEO	L (~2 days for 4 pages)	High — comparison

Priority	Issue	Dimension	Effort	Impact
	pages			search intent has the highest commercial value
● High	Homepage copy aligned to old "translate" positioning, not new "understand"	SEO + GEO	S (2 hrs to update locales)	High — keyword targeting wrong-footed
● High	HowTo schema missing despite obvious 3-step section	AEO	XS (10 min — already scaffolded)	Medium — featured-snippet capture
● Medium	<code>WebSite.inLanguage</code> missing <code>id</code> , <code>ms</code>	GEO	XS	Low
● Medium	hreflang via <code>?lang=X</code> query string — path-based ranks marginally better	SEO	M (i18n refactor)	Low-Medium — phase 2 work
● Medium	No named authors / team page	GEO	M (write team copy + headshots)	Medium — AI-search citation depth
● Quick Win	<code>WebSite.SearchAction</code> schema not declared	AEO	XS (5 min — in scaffold)	Low — enables sitelinks search box
● Quick Win	Inner routes have no per-page metadata overrides	SEO	S (30 min — see <code>inner-route-metadata.md</code>)	Medium
● Quick Win	No "Translify is..." definition sentence on landing	GEO + AEO	XS	Low-Medium

30 / 60 / 90 plan (ordered by ROI)

Days 1–7: Stop the bleeding

1. Generate `og-image.png` (1200×630), `favicon.ico` (32×32 multi-res), `icon-32.png`, `icon-192.png`, `icon-512.png`, `apple-touch-icon.png` (180×180). Place in `apps/web/public/`. ~1 hour with any logo or screenshot.
2. Replace `apps/web/src/components/structured-data.tsx` with the corrected version at `seo/scaffolds/structured-data.tsx`. Fixes the price mismatch, removes the fake `AggregateRating`, adds `HowTo` + `SearchAction`, extends `inLanguage`.
3. Replace `apps/web/src/app/layout.tsx`'s metadata + viewport export with the version at `seo/scaffolds/layout-metadata.ts`. New tagline aligned to the locked positioning.
4. Update `en.ts` (and the 7 other locale files) — change `hero.title.1` / `hero.title.2` to map to *"Understand any book, in your language"* (or your preferred phrasing of the locked positioning). Cascade through `feat.*` keys to lead with comprehension, not translation.
5. Add per-page metadata exports to `/onboarding`, `/login`, `/register` per `seo/copy/inner-route-metadata.md`.
6. Build `/manifesto` as a real page (300-600 words) with the metadata in `inner-route-metadata.md`. Without this, the GEO score stays capped at 6.

Days 8–30: Build the programmatic surface

7. Drop in `seo/scaffolds/read-source-in-target-page.tsx` at `apps/web/src/app/read-[source]-books-in-[target]/page.tsx`. This generates all 56 pages at build time. Verify with `pnpm build` that 56 static pages are rendered.
8. Build `/languages` index page that lists every supported pair and links to the 56 programmatic pages — this is the hub that gives the spokes internal-link equity. ~3 hours.
9. Replace `apps/web/src/app/sitemap.ts` with `seo/scaffolds/sitemap.ts`. Submit the new sitemap to Google Search Console + Bing Webmaster Tools.
10. Drop in `seo/scaffolds/competitor-alternative-page.tsx` at `apps/web/src/app/alternative/[slug]/page.tsx`. Ships 4 high-converting pages (Readlang, Immersive Translate, Kindle Translate, DeepL alternative).
11. Generate 60 OG images (56 language-pair + 4 alternative) — automate with a Next.js `opengraph-image.tsx` template using `next/og`. ~2 hours.
12. Set up **Google Search Console** + verify domain ownership. Submit sitemap. Set up daily email reports.
13. Set up **Bing Webmaster Tools** (often forgotten — 8% of US search market, more in EU).
14. Set up **Plausible** or **PostHog** (free tier) for organic-traffic tracking. Don't use GA4 if you can avoid

it — its sampling is brutal at low traffic.

Days 31–60: Build content authority

15. Write the first 6 blog posts at `/blog/*`. Topics ranked by ROI:

- "How to read a German philosophy book in English (without losing the nuance)" — long-tail intent
- "The best AI tools for studying foreign-language books in 2026" — listicle that includes Translify
- "DeepL Pro vs Translify: when each is the right choice" — comparison
- "How to translate a textbook into your native language (PDF + EPUB guide)" — how-to with HowTo schema
- "Reading Murakami in Japanese: an AI-assisted approach" — author-specific long-tail
- "Why Kindle Translate isn't enough for serious foreign-language reading" — comparison post Word count target: 1,500-2,500 each. Each gets FAQPage schema with 4-6 questions. ~4 days of writing work or ~\$2k from a freelance writer.

16. Add a **named-author profile** to each blog post via `Article.author` and a `/about/[author]` page. Strong E-E-A-T lift.

17. Set up **Trustpilot** account, prompt 50 early users for reviews via the welcome email. Once you have 25+ verified reviews, you can legitimately add AggregateRating back to schema with a citation to Trustpilot via `reviewedBy` or by linking the Trustpilot page.

18. Build **comparison landing pages** for the next 4 competitors (Parallel Books, Duoreader, Linga, Smart Book) — 8 total.

Days 61–90: Scale + monitor

19. Launch the **affiliate / referral program** — even simple 30% commission on first month drives backlinks at scale.

20. Pitch a guest post to 10 reading/study/language-learning blogs (Polyglot Notes, Fluent in 3 Months, r/languagelearning sidebar list, Reading Rockets, EdSurge). Each backlink from these compounds for years.

21. Generate **author/genre programmatic pages**: `/read-{author}-in-{language}` for 50 well-known authors (Murakami in English, García Márquez in English, Camus in English, Goethe in English, etc.). ~3 days work for ~200 new pages with low keyword competition.

22. Add **video schema** to the homepage live-demo (`VideoObject`) — major SEO signal for product pages.

23. Run **Google PageSpeed Insights + Core Web Vitals** checks. Tune any LCP, INP, CLS issues. Next.js 15 + Server Components handles most of this for free.

24. **Reach out to Funstory.ai** about acquiring `translify.ai`. Long shot but cheap.

25.By day 90, expect: 60+ indexed pages, ~500-2,000 monthly organic visitors from non-brand keywords, first-page rankings for **Readlang alternative** and **Translify** brand searches, top 3 for several **read {source} books in {target}** long-tails.

KPIs and tools

Free-tier tracking stack

Metric	Tool	Cost
Indexed pages, top queries, click-through rate	Google Search Console	Free
Bing/Yahoo coverage	Bing Webmaster Tools	Free
Organic traffic, referrers, top pages	Plausible (open-source) or PostHog free tier	Free / \$9/mo
Keyword rank tracking	Google Search Console (free, 1,000 queries) + Ubersuggest (3 free searches/day)	Free
Backlinks discovered	Google Search Console (links report)	Free
Schema validation	Google Rich Results Test (search.google.com/test/rich-results)	Free
Core Web Vitals	PageSpeed Insights	Free
AI-search citation tracking	Manual — query Perplexity / ChatGPT Search / Claude weekly for "AI book reader" , "Readlang alternative" , etc. and log which competitors get cited	Free

Targets at 30 / 60 / 90 days

Metric	Day 30	Day 60	Day 90
Indexed pages	60+ (from 4)	90+	200+ (with author pages)
Brand search ranking ("translify")	#1	#1	#1
Non-brand keyword first-page ranks	2-5	8-15	20-40
Organic visitors / mo (non-brand)	100-300	500-1,500	1,500-5,000
Featured snippets captured	1-2	3-5	5-10
AI-search citations (Perplexity/ChatGPT)	0-1	2-5	5-15
Trustpilot reviews	5-10	25-40	50-100
Sign-up conversion from /alternative/* pages	n/a	2-4%	3-6%

If you're not hitting these by Day 90, the issue is not SEO mechanics — it's either product-market-fit or the underlying positioning. Re-run the niche analysis before doubling down on SEO.

What's working well

1. **Comprehensive Pydantic-style metadata in `layout.tsx`** — `metadataBase`, `title.template`, `openGraph`, `twitter`, `robots.googleBot`, `icons`, `manifest`, `formatDetection` are all configured. This is meaningfully better than most pre-launch SaaS sites.
2. **Five distinct JSON-LD blocks already emitted** (Organization, WebSite, SoftwareApplication, FAQPage, BreadcrumbList). Once the data inside them is fixed, you go from average to strong overnight.
3. **FAQPage with 8 well-formed Q&As** — long enough to provide context, short enough to be featured-snippet-eligible. This is your single strongest SEO asset.
4. **8-locale i18n architecture** with manual hreflang emission — already built, just needs the programmatic pages on top of it.
5. **Distinct brand voice** — the homepage copy reads like a publishing brand, not a generic AI SaaS. AI search engines (Perplexity, Claude) preferentially cite pages with editorial voice over generic feature copy.

6. `robots.ts` and `sitemap.ts` already use Next.js 15's `MetadataRoute` pattern — you're following best practices, just need to expand the URL set.
-

Glossary

SEO (Search Engine Optimization) — getting your pages to rank in traditional search engines like Google and Bing. Driven by on-page signals (titles, headings, content) + off-page signals (backlinks, brand mentions) + technical signals (Core Web Vitals, crawlability).

GEO (Generative Engine Optimization) — getting your pages cited by AI search engines like Perplexity, ChatGPT Search, Claude search, and Gemini. These engines synthesize answers from multiple sources and cite a handful of them. Higher rewards for factual density, clear claims, structured data, and brand-entity signals than for backlinks.

AEO (Answer Engine Optimization) — getting your content extracted into featured snippets, People Also Ask boxes, and voice-assistant answers. Driven by FAQ/HowTo schema, question-phrased headings, and 40-60 word direct-answer paragraphs.
